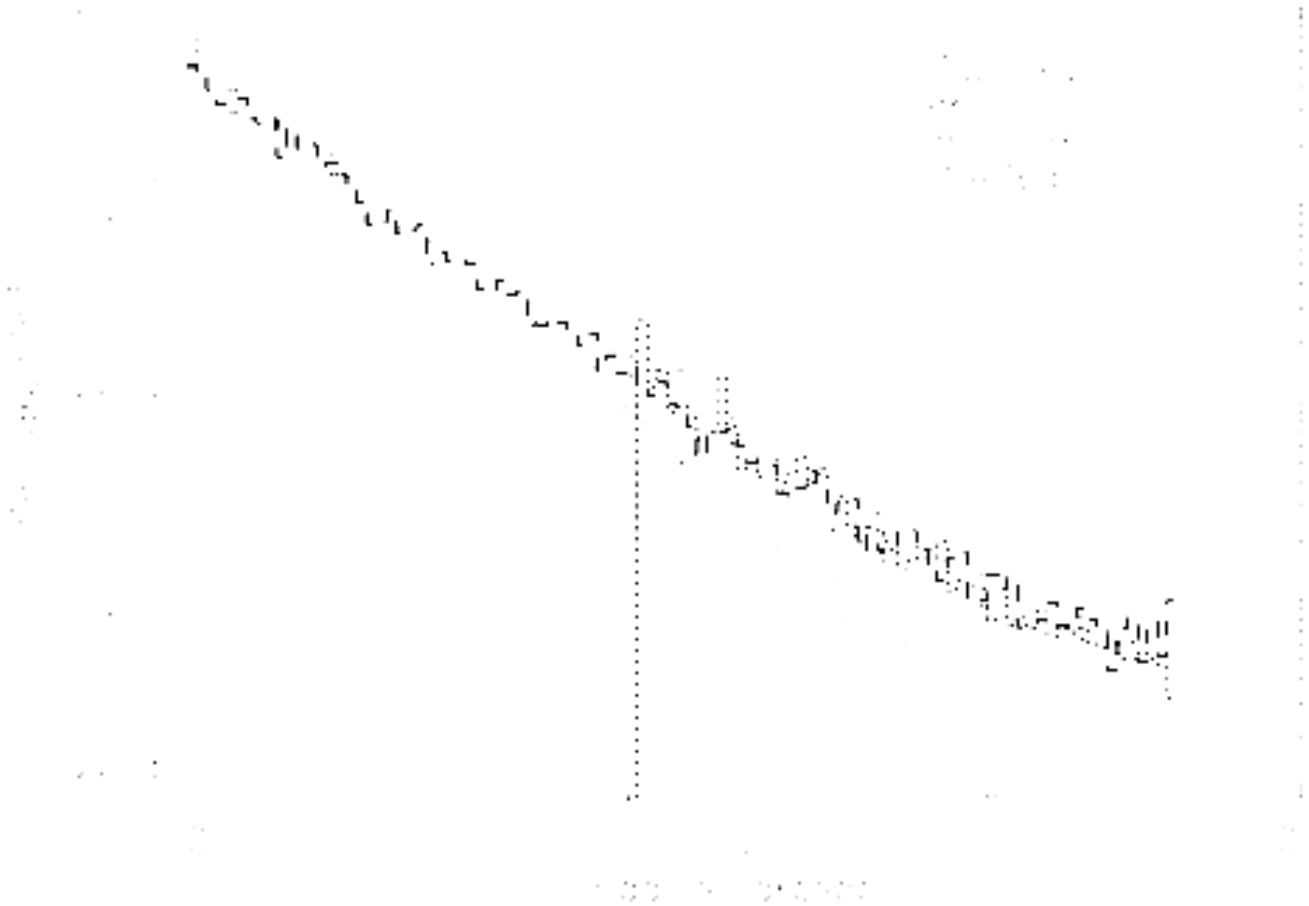
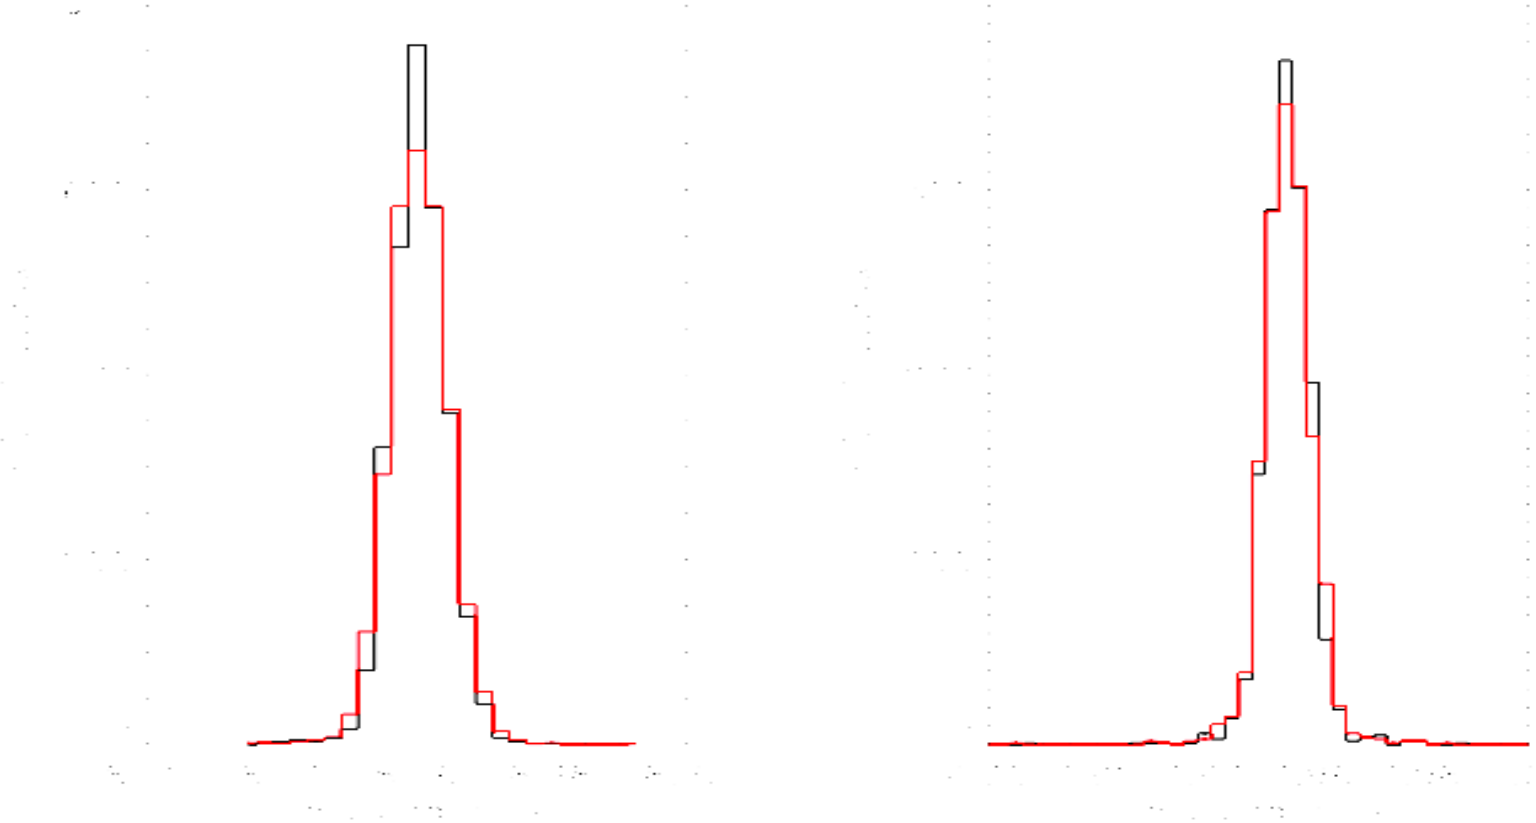
The Advantages of User Collaboration with the Calibration Team

Randall Smith
NASA/GSFC and JHU



Dispite SAOsac's excellent agreement within 15'', □ micro-roughness affects the far-off-axis PSF and is extremely difficult to model. Nonetheless, these results are necessary for X-ray dust halo modeling



Does pixel randomization affect grating resolution?
Yes, and **MARX will show it**.

(HEG Gaussians are 10% narrower without randomization)
